Playsafe Mouthguards

For high impact and professional sports

☐ HEAVY PRO ☐ TRIPLE ☐ LIGHT PRO ☐ TRIPLE LIGHT

Made from 3 layers, using a hard internal layer. For sports where extremely hard or pointed impacts may be received. The hard layer in the Playsafe Heavy & Light Pro extends over the incisal and labial aspects of the dentition while the Triple & Triple Light incorporates the hard layer through the entire mouthguard - this gives a slightly firmer feel but means that there can be far less bulk in the palatal area. These mouthguards are best suited to stable adult teeth, use the Light versions if space or bulk is a concern.

For sports such as Senior Rugby, Hockey, AFL, Ice Hockey, Karate, Squash, Kickboxing

For club sports and junior players

☐ MEDIUM ☐ LIGHT

Playsafe Medium and Light are dual laminated mouthguards The Medium is designed for general use and sports with likely impacts from objects with a larger surface area eg Boxing, Basketball, Soccer, Judo, Wrestling etc Choose the Playsafe Light for children (up to ~ 13yrs) and sports that require a mouthguard to protect lower teeth from damage (eg motorsports) Flexible, comfortable and can be readapted to changing teeth

Colours and graphics

PlaySafe 4u makes it easy to add graphics to a Playsafe Mouthguard, simply choose the colour or colours for your mouthguard, select graphics from the Playsafe brochure and indicate the graphics position on the mouthguard outline

Custom graphics for sports clubs, schools or your surgery logos are also possible, e-mail or call us to discuss your ideas

Laboratory Work Times Including Delivery

Occlusal Splints, Snoring & OSA	5 working days
